

SECURITIES AND EXCHANGE COMMISSION

SEC FORM 17-C

**CURRENT REPORT UNDER SECTION 17
OF THE SECURITIES REGULATION CODE
AND SRC RULE 17.2(c) THEREUNDER**

1. Date of Report (Date of earliest event reported): 20 October 2023
2. SEC Identification Number: 39274
3. BIR Tax Identification No.: 000-506-020-000
4. Exact name of issuer as specified in its charter: ACEN CORPORATION
5. Province, country or other jurisdiction of incorporation: Makati City, Philippines
6. Industry Classification Code: (SEC Use Only)
7. Address of principal office: Postal Code:
**35th Floor, Ayala Triangle Gardens Tower 2,
Paseo de Roxas corner Makati Avenue, Makati City** 1226
8. Issuer's telephone number, including area code: (632) 7730 6300
9. Former name or former address, if changed since last report: N/A
10. Securities registered pursuant to Sections 8 and 12 of the SRC or Sections 4 and 8 of the RSA:

Title of Each Class	Number of Shares of Common Stock Outstanding
Common Shares	39,677,394,773
Series A Preferred Shares	8,341,500
Series B Preferred Shares	16,658,500

11. Indicate the item numbers reported herein: **Item 9. Other Events
Please see attachment.**

SIGNATURES

Pursuant to the requirements of the Securities Regulation Code, the issuer has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

FINAL
PRESS RELEASE

ACEN's Yindjibarndi Energy signs Pilbara renewables MOU with Rio Tinto

- A partnership to lay the groundwork for potential renewable energy ventures on Yindjibarndi land in Western Australia
- Initial focus to explore possibilities for a solar plant catering to Rio Tinto's energy needs
- An ambitious initial goal of 750 MW renewable energy capacity sourced from wind, solar and battery storage is set by the company for the next few years

20 October 2023 – ACEN, through its subsidiary, Yindjibarndi Energy Corporation (YEC), signed a memorandum of understanding (MOU) with Rio Tinto to explore opportunities to collaborate on renewable energy projects on Yindjibarndi country in the Pilbara region of Western Australia.

Rio Tinto and YEC will study and evaluate a range of opportunities including wind and solar power as well as battery energy storage systems. The initial focus is on rapidly exploring the potential development of a solar power generation facility for the supply of energy to Rio Tinto.

Rio Tinto operates four gas-fired power stations in the Pilbara. About 600 MW to 700 MW of renewable generation is estimated to be required to displace the majority of gas use across its network. The company is currently assessing the development of approximately 300 MW of solar projects. The collaboration opportunities currently being explored by Rio Tinto and YEC if progressed, would be complementary to renewable energy developments on Rio Tinto Iron Ore's electricity grid.

YEC was established in June following an agreement between Yindjibarndi Aboriginal Corporation (YAC) and ACEN to progress the development of major renewable energy projects on Yindjibarndi Ngurra (country) – an area covering approximately 13,000 km² within the Yindjibarndi Native Title Determination Areas.

YEC's initial plans include a Stage 1 target of 750 MW of combined wind, solar, and battery storage with construction to commence within the next few years. The collaboration opportunities being considered by Rio Tinto and YEC relate to some of these Stage 1 projects.

ACEN International CEO Patrice Clause, said: "This MOU signifies more than just a partnership; it's a testament to the shared vision of sustainable energy development on Yindjibarndi Ngurra. It is the perfect blend of traditional significance and modern technology, designed to harness the limitless potential of the Pilbara's sun and wind, while respecting the deep-rooted connection of the Yindjibarndi people with their land. Together, we are crafting an energy future that is not only renewable, but also renewing, by empowering local communities and contributing to a greener future."

Rio Tinto Iron Ore Chief Executive Simon Trott, said: “We are focused on repowering our Pilbara operations with renewable energy through the end of this decade and beyond by replacing gas and diesel with clean energy alternatives. The Pilbara is blessed with abundant year-round sunshine and strong winds at night, making it one of the most attractive places in the world to harness solar and wind power for energy generation. We’re excited to be deepening our partnership with the Yindjibarndi People through this agreement and look forward to working closely with them.

“We recognise we have a large carbon footprint in the Pilbara and are exploring a number of innovative solutions to help address this, including future collaborations with other Traditional Owner groups in the region.”

###

Notes to editors:

Rio Tinto has committed to reducing its Scope 1 and 2 emissions by 50% by 2030 across its global operations, with an estimated \$7.5 billion planned to be spent on decarbonisation projects, predominantly in the second half of the decade. These projects will support a longer-term ambition of net zero emissions by 2050.

Rio Tinto’s rail network, which connects its Pilbara mines to ports at Cape Lambert and Dampier in Western Australia, traverses Yindjibarndi Country. Rio Tinto has held a Participation Agreement and Indigenous Land Use Agreement with YAC, the representative body for the Yindjibarndi people, since 2013.

Last year, Rio Tinto and YAC signed an updated agreement aimed at strengthening ties and delivering improved social and economic outcomes for the Yindjibarndi people. The agreement reflects a joint commitment to work together to create more opportunities for the Yindjibarndi people to participate in Rio Tinto’s operations, including direct and indirect employment opportunities, and build sustainable long-term benefits to the community.

About ACEN

ACEN (PSE:ACEN) is the listed energy platform of the Ayala Group. The company has ~4,500 MW of attributable capacity from owned facilities in the Philippines, Australia, Vietnam, Indonesia and India, with a renewable share of 98%, which is among the highest in the region.

ACEN's aspiration is to be the largest listed renewables platform in Southeast Asia, with a goal of reaching 20 GW of renewables capacity by 2030. ACEN is committed to transition the company's generation portfolio to 100% renewable energy by 2025 and to become a Net Zero greenhouse gas emissions company by 2050.
